2. The MallMart Layaway System requires the following interfaces:

- a. Customer Interface: This interface is needed to capture the customer's personal information such as name, address, and telephone number. The customer uses this interface to make payments, check on the status of their layaway, and pick up their merchandise.
- b. Clerk Interface: This interface is needed to enter customer information, record layaway details, and record payments. The clerk also uses this interface to check whether a layaway payment has been completed and to change the status of the layaway record.
- c. Cash Register Interface: This interface is used to process payments made by customers.
- d. Inventory Interface: This interface is used to record the quantity of items on hand and to reduce the quantity when an item is sold.
- e. Manager Interface: This interface is used to prepare reports of expired layaways and to prepare refund checks. The manager uses this interface to record information about the refund check.
